

KSB / KSI / KSI-P

the Barcode Checkpoints

Three bar code checkpoint options for great flexibility. Choose a type suitable for the application, with or without copy protection, or a durable checkpoint suitable for outdoor use. Barcode checkpoint technology is economical and unobtrusive.

KSB – a simple, self-adhesive checkpoint with a visible barcode. Can be used either for normal location checkpoints or event checkpoints.

KSI – a secure self-adhesive barcode checkpoint concealed under a durable opaque foil, which prevents photocopying, but is transparent to infrared light of the data collector. This checkpoint self-destructs if removal is attempted.

KSI-P – a durable barcode checkpoint encapsulated in a plastic housing, which is transparent to infrared light. Suitable for indoor and outdoor use.

Your Advantages at a Glance

- Economical and unobtrusive design, suitable for indoor and outdoor use
- can be mounted discreetly at the locations required.
- Easy-to-handle event cards for easy recording of information during the guard tour.
- perfectly complements the proximity checkpoint KSC together with the Duostar.

KSB

KSI

KSI - P

Technical data

KSB

Dimensions: 26 x 70 mm
Installation: self-adhesive on flat surfaces

KSI

Dimensions: 26 x 101 mm
Installation : self-adhesive on flat surfaces

KSI-P

Dimensions: 30 x 117 x 6 mm
Housing: Polycarbonate
Protection class: IP67
Installation: industrial adhesive or screws

Accessories

Event Card KSB-E

for recording of events during the guard tour and for time and personnel-ID checkpoints

Security Screw HD, Screwdriver HD

for safe mounting of the checkpoint. This screw cannot be turned with usual tools.

Suitable Data Collectors

Duostar and the discontinued models de watch, magscan, proxscan, triscan and WK 1100
