

proxSafe *maxx*

keyManagement

proxSafe maxx #00302.000

proxSafe maxx is a key management system that combines the advantages of a superior electronic system with an architecturally design appearance. The smart design allows application in all solutions where the visual appearance counts as well as reliable technology.

Thanks to the automatic roller shutter this cabinet needs only little space for operation. The cabinet opens and closes automatically.

Modular System

A proxSafe maxx cabinet manages up to 32 keys. Several cabinets can be combined to form a large complete system. Together with the proxSafe terminal and the proxSafe application in the ZK2000SF this is an easy-to-install key management system which can be adapted to changing requirements at any time.

Reliable Technology

The generous resident memory of the user terminal allows operation even if the network fails and a back-up battery bridges in case of power failures. An emergency key is provided in order to allow manual access to the cabinets and keyTags if necessary.

100% Maintenance Free

The keyTags and slots are designed for rugged operation. There are no electrical contacts on the keyTags. Dirt, corrosion or wear by daily operation are impossible. The proxSafe keyTags require no maintenance.

Technical Data

Dimensions (mm): H 600, W 513, D 187

Housing material: sheet steel, powder-coated, ASA, PC

Weight: ca. 17 kg

Operating Temp.: -5...50°C, non-condensing; for indoor use

Voltage supply: 13.8 V/DC (1 proxSafe power supply unit for 2 cabinets)

Current

consumption: max. 3.0 A

Closing force for the Roller Shutter: max. 30 N

Back-up battery: 2300 mAh (operating time min. 4 hours; up to 24 hours when in power save mode)
