

# Online Patrol

## Online Surveillance Software

This software provides real-time management and evaluation of data collected in the field. It is ideally suited for district or mobile drivers, location guarding services and monitoring the personnel safety of lone workers.

The system can be used with either standard radios, trunking radios or GSM via SMS data transfer depending on the existing hardware.

### Configuration of Master Data

The following master data with various parameters and information fields are stored in the database:

- customer and location data
- checkpoints
- patrols with minimum, maximum and interval times and order monitoring
- personnel data and time recording
- events

### Online Evaluation of Collector Data

Data that has been received from online data collectors are displayed in an online screen. Any deviations from the planned patrols as well as alarms that have been actuated directly at the data collector are displayed on the screen. All events can be linked with external programs and sounders.

### Furthermore the data can be summarised the following reports:

- Online report with all events and alarms
- Collector report with all data of one collector

### External Devices

Online patrol for Windows can operate the configuration of the radio interface WK 1204 and the data collector de protect/2.

### Working in a LAN

The data base can be stored on a LAN device and be accessed from various workplaces. Two password levels secure the access to the master data.

### **Technical Data**

Operating system: Windows 95/98/NT/2000/XP

Memory capacity: 5,000 customers

5,000 locations

10,000 patrols

50,000 location checkpoints

2,000 event checkpoints

2,000 personnel checkpoints

60 calendars

### **Accessories**

Master Patrol for comprehensive reports and sharing of data with offline data collectors

Master Patrol Viewer for reading of the database and creating of reports.

### **Suitable Data Transfer Unit**

Radio Interface WK 1204

### **Suitable Data collector**

de protect/2 and the previous type de protect (the latter together with the programming software windepp.)
